SUMMARY

Marketing operations and GTM systems builder who owns the stack end to end: CRM and marketing automation administration, the webhooks and REST/LLM API calls that connect it, and the routing and scoring logic that decides who a lead reaches and how fast. Designs agentic AI workflows that score unstructured prospect signals and trigger personalized follow-up, running in production for clients today. Brings 15+ years inside B2B SaaS sales, onboarding, and partner teams (Salesforce, HubSpot), so the systems get built around how marketers and SDRs actually work, then documented and taught so the team can run them without filing a ticket.

- Build and deploy production automations in Zapier, Make, n8n, and GoHighLevel that call external APIs: inbound and outbound webhooks, REST calls, and direct LLM API calls (OpenAI, Claude), writing Python and JavaScript in custom code steps and debugging JSON payloads when an integration breaks.
- Built an agentic scoring workflow that evaluates unstructured signals from a prospect's web presence and digital footprint, then routes each one into personalized, sequenced outreach; 180+ businesses enrolled, 2 converted to paying clients.
- Architected 20+ GoHighLevel workflows across lead capture, tagging and routing, qualification, booking, no-show recovery, onboarding, and reactivation, keeping source, status, and lifecycle stage clean on every record.
- Configure and maintain syncs between marketing automation and CRM (GoHighLevel, HubSpot), owning field mapping, lifecycle stage definitions, lead scoring and qualification criteria, and data-hygiene rules.
- Build dashboards tracking lead flow, funnel progression, campaign ROI, and pipeline velocity in GA4, Power BI, and CRM reporting, and grade AI-generated output against rubric-based evaluation criteria.
